

# Alien Arena Management Console (1.4)

---

Allows you to manage your Alien Arena server with a text based GUI - Official support sites: [Official Github Repo](#) - [Official Forum](#)

---

You will need to run cpan and install these modules:

- `cpan -i UI::Dialog`
- `cpan -i Term::ReadKey`
- `cpan -i Term::ANSIScreen`

Run "aamc". If you need to change any settings after this, edit "~/.aamcrc" and make the desired changes. This can be done within aamc itself.

You also need to have my Alien Arena Startup Script and Alien Arena Backup Script installed.

I then suggest you add this directory (AlienArenaManagement) into your path, so that you can just run "git pull" to upgrade to the latest version aamc as updates come out.
